Summary

Of the 52 citations in the original bibliography, 22 were retained in the final document.

A literature search was conducted in June 2017 to identify additional evidence published since the ACR Appropriateness Criteria® Breast Pain topic was finalized. Using the search strategy described above, 188 articles were found. 17 articles were added to the bibliography. The remaining articles were not used due to either poor study design, the articles were not relevant or generalizable to the topic, or the results were unclear or biased.

The author added 2 citations from bibliographies, websites, or books that were not found in the literature searches.

1 citation is a supporting document that was added by staff.
