Summary

Of the 18 citations in the original bibliography, 18 were retained in the final document.

A literature search was conducted in September 2017 to identify additional evidence published since the ACR Appropriateness Criteria® Evaluation of the Symptomatic Male Breast topic was finalized. Using the search strategy described above, 952 articles were found. 16 articles were added to the bibliography. The remaining articles were not used due to either poor study design, the articles were not relevant or generalizable to the topic, or the results were unclear or biased.

1 citation is a supporting document that was added by staff.
