A literature search was conducted in January 2014, September 2014, and March 2016 to identify evidence for the ACR Appropriateness Criteria® Tinnitus topic. Using the search strategies described above, 515 articles were found. Fifty-five articles were used in the topic. The remaining articles were not used due to either poor study design, the articles were not relevant or generalizable to the topic, or the results were unclear or biased.

The author added four citations from bibliographies, websites, or books that were not found in the literature searches because they were published outside of the search date ranges.

Four citations are supporting documents that were added by staff.
