**Literature Search Summary**

Of the 36 citations in the original bibliography, 13 were retained in the final document.

A literature search was conducted in March 2016 to identify additional evidence published since the ACR Appropriateness Criteria® Chronic Chest Pain-Noncardiac Etiology Unlikely: Low to Intermediate Probability of Coronary Artery Disease topic was finalized. Using the search strategy described above, 341 unique articles were found. Thirty-three articles were added to the bibliography. The remaining articles were not used due to either poor study design, the articles were not relevant or generalizable to the topic, or the results were unclear or biased.

The author added 21 citations from bibliographies, websites, or books that were not found in the literature search, including 5 articles outside of the search date range.

One citation is a supporting document that was added by staff.
