Literature Search Summary

Of the 89 citations in the original bibliography, 6 were retained in the final document.

A literature search was conducted in September 2013, May 2015, and March 2016 to identify evidence published since the ACR Appropriateness Criteria® Osteoporosis and Bone Mineral Density topic was finalized. Using the search strategy described above, 19,861 articles were found. Sixty-eight articles were added to the bibliography. The remaining articles were not used due to either poor study design, the articles were not relevant or generalizable to the topic, the results were unclear or biased, or the articles were already cited in the original bibliography.

The author added 13 citations from bibliographies, websites, or books that were not found in the literature search. Two citations are supporting documents that were added by staff.
