Literature Search Summary

Of the 86 citations in the original bibliography, 43 were retained in the final document.

A literature search was conducted in July 2016, December 2016, May 2017 to identify additional evidence published since the *ACR Appropriateness Criteria*[®] Post-treatment Follow-up Prostate Cancer topic was finalized. Using the search strategies described above, 5,997 unique articles were found. 60 articles were added to the bibliography. The remaining articles were not used due to either poor study design, the articles were not relevant or generalizable to the topic, or the results were unclear or biased.

The author added 23 citations from bibliographies, websites, or books that were not found in the literature searches.

One citation is a supporting document that was added by staff.
