Literature Search Summary

Of the 73 citations in the original bibliography, 39 were retained in the final document.

A literature search was conducted in April 2015 and February 2017 to identify additional evidence published since the ACR Appropriateness Criteria® Renovascular Hypertension topic was finalized. Using the search strategies described above, 997 articles were found. Sixteen articles were added to the bibliography. One hundred eighty-nine articles were not used as they were duplicates already cited in the original or captured in more than one literature search. The remaining articles were not used due to either poor study design, the articles were not relevant or generalizable to the topic, or the results were unclear or biased.

The author added 13 citations from bibliographies, websites, or books that were not found in the literature searches.

Two citations are supporting documents that were added by staff.
