Literature Search Summary

Of the 70 citations in the original bibliography, 54 were retained in the final document.

A literature search was conducted in August 2012, November 2013, January 2015, and June 2015 to identify additional evidence published since the ACR Appropriateness Criteria® Chronic Chest Pain–High Probability of Coronary Artery Disease topic was finalized. Using the search strategies described above, 672 articles were found. Thirty articles were added to the bibliography. Ninety-five articles were not used as they were duplicates already cited in the original bibliography or captured in more than one literature search. The remaining articles were not used due to either poor study design, the articles were not relevant or generalizable to the topic, or the results were unclear or biased.

The author added 15 citations from bibliographies, websites, or books that were not found in the literature searches.
