20 limit 19 to case reports (156)
21 19 not 20 (276)
22 remove duplicates from 21 (268)
Literature Search Summary

Of the 65 citations in the original bibliography, 57 were retained in the final document.

A literature search was conducted in April 2015 and June 2016 to identify additional evidence published since the ACR Appropriateness Criteria® Pulsatile Abdominal Mass–Suspected Abdominal Aortic Aneurysm topic was finalized. Using the search strategies described above, 2624 articles were found. Twenty-one articles were added to the bibliography. Eighty-eight articles were not used as they were duplicates already cited in the original bibliography or captured in more than one literature search. The remaining articles were not used due to either poor study design, the articles were not relevant or generalizable to the topic, or the results were unclear or biased.

The author added 5 citations from bibliographies, websites, or books that were not found in the literature searches. One citation is a supporting document that was added by staff.
