17     15 not 16 (154)
18     remove duplicates from 17 (151)

Literature Search Summary

Of the 59 citations in the original bibliography, 50 were retained in the final document.

A literature search was conducted in April 2015, June 2017, and July 2015 to identify additional evidence published since the ACR Appropriateness Criteria® Chronic Ankle Pain topic was finalized. Using the search strategies described above, 1,359 unique articles were found. Thirty-eight articles were added to the bibliography. The remaining articles were not used due to either poor study design, the articles were not relevant or generalizable to the topic, or the results were unclear or biased.

The author added 3 citations from bibliographies, websites, or books that were not found in the literature search.

Five citations are supporting documents that were added by staff.
