Literature Search Summary

Of the 46 citations in the original bibliography, 4 were retained in the final document.

A literature search was conducted in June 2016 and June 2017 to identify additional evidence published since the ACR Appropriateness Criteria® Chronic Knee Pain topic was finalized. Using the search strategies described above, 349 unique articles were found. Forty-eight articles were added to the bibliography. The remaining articles were not used due to either poor study design, the articles were not relevant or generalizable to the topic, or the results were unclear or biased.

The author added 6 citations from bibliographies, websites, or books that were not found in the literature search, including 2 articles outside of the search date range.

Eight citations are supporting documents that were added by staff.
