Literature Search Summary

Of the 40 citations in the original bibliography, 22 were retained in the final document.

A new literature search was conducted in August 2013, May 2015, and April 2016 to identify additional evidence published since the ACR Appropriateness Criteria® Stress (Fatigue/Insufficiency) Fracture, Including Sacrum, Excluding Other Vertebrae topic was finalized. Using the search strategies described above, 782 articles were found. Forty-four articles were added to the bibliography. The remaining articles were not used due to either poor study design, the articles were not relevant or generalizable to the topic, the results were unclear, misinterpreted, or biased, or the articles were already cited in the original bibliography.

The author added 13 citations from bibliographies, websites, or books that were not found in the new literature search.

Four citations are supporting documents that were added by staff.
