limit 17 to case reports (41)
19 17 not 18 (77)

Notes:
exp = explode (retrieves results using the selected term and all of its more specific terms)
.mp = multi-purpose (retrieves results that have this keyword in several fields)

Literature Search Summary
Of the 22 citations in the original bibliography, 21 were retained in the final document. Articles were removed from the original bibliography if they were more than 10 years old and did not contribute to the evidence or they were no longer cited in the revised narrative text.

A new literature search was conducted in July 2013 and updated in October 2013 and May 2015 to identify additional evidence published since the ACR Appropriateness Criteria® Routine Chest Radiography topic was finalized. Using the search strategies described above, 132 articles were found. Five articles were added to the bibliography. One hundred twenty-seven articles were not used due to either poor study design, the articles were not relevant or generalizable to the topic, the results were unclear, misinterpreted, or biased, or the articles were already cited in the original bibliography.

The author added 21 citations from bibliographies, websites, or books that were not found in the new literature search.
