Literature Search Summary

Of the 78 citations in the original bibliography, 39 were retained in the final document.

A literature search was conducted in August, 2013, February 2014, March 2016, and February 2017 to identify additional evidence published since the ACR Appropriateness Criteria® Multiple Gestations topic was finalized. Using the search strategies described above, 347 articles were found. Twenty articles were added to the bibliography. The remaining articles were not used due to either poor study design, the articles were not relevant or generalizable to the topic, or the results were unclear or biased.

The author added 42 citations from bibliographies, websites, or books that were not found in the literature searches, including 20 articles outside of the search date ranges.

Seven citations are supporting documents that were added by staff.
