11     (8 or 9) and 10 (2201)
12     limit 11 to (abstracts and english language and humans and yr="2011 -Current") (363)
13     limit 12 to case reports (183)
14     12 not 13 (180)

Literature Search Summary

Of the 30 citations in the original bibliography, 10 were retained in the final document.

A literature search was conducted in June 2015, to identify additional evidence published since the ACR Appropriateness Criteria® Orbits, Vision and Visual topic was finalized. Using the search strategies described above, 247 unique articles were found. Twenty articles were added to the bibliography. The remaining articles
were not used due to either poor study design, the articles were not relevant or generalizable to the topic, or the results were unclear or biased.

The author added 36 citations from bibliographies, websites, or books that were not found in the literature searches, including 18 articles outside of the search date ranges.

Four citations are supporting documents that were added by staff.
