</table>

********************************************
Notes:
exp = explode (retrieves results using the selected term and all of its more specific terms)
* = focus (limits search to those documents in which the subject heading is considered the major point of the article)
.mp = multi-purpose (retrieves results that have this keyword in several fields)

Literature Search Summary
Of the 45 citations in the original bibliography, 40 were retained in the final document. Articles were removed from the original bibliography if they were more than 10 years old and did not contribute to the evidence or they were no longer cited in the revised narrative text.

A new literature search was conducted in June 2015 and updated in August 2016 to identify additional evidence published since the ACR Appropriateness Criteria® Palpable Breast Masses topic was finalized. Using the search strategy described above, 3883 articles were found. Twenty-eight articles were added to the bibliography. The remaining articles were not used due to either poor study design, the articles were not relevant or generalizable to the topic, the results were unclear, misinterpreted, or biased, or the articles were already cited in the original bibliography.

The author added 14 citations from bibliographies, websites, or books that were not found in the new literature search.

Five citations are supporting documents that were added by staff.
