Literature Search Summary

Of the 24 citations in the original bibliography, 24 were retained in the final document.

A new literature search was conducted in December 2013 and updated in November 2015 to identify additional evidence published since the ACR Appropriateness Criteria® Radiologic Management of Mesenteric Ischemia topic was finalized. Using the search strategies described above, 55 articles were found. Six articles were added to the bibliography. Forty-nine articles were not used due to either poor study design, the articles were not relevant or generalizable to the topic, the results were unclear, misinterpreted, or biased, or the articles were already cited in the original bibliography.

The author added 3 citations from bibliographies, websites, or books that were not found in the new literature search.
