**Literature Search Summary**

Of the 44 citations in the original bibliography, 32 were retained in the final document.

A literature search was conducted in April 2015 and March 2017 to identify additional evidence published since the *ACR Appropriateness Criteria® Sinonasal Disease* topic was finalized. Using the search strategies described above, 413 articles were found. Three articles were added to the bibliography. The remaining articles were not used due to either poor study design, the articles were not relevant or generalizable to the topic, or the results were unclear or biased.

The author added 21 citations from bibliographies, websites, or books that were not found in the literature searches, including 13 articles outside of the search date ranges.

One citation is a supporting document that was added by staff.
