Literature Search Summary

Of the 62 citations in the original bibliography, 61 were retained in the final document. Articles were removed from the original bibliography if they were more than 10 years old and did not contribute to the evidence or they were no longer cited in the revised narrative text.

New literature searches were conducted in September 2017 and June 2015 to identify additional evidence published since the ACR Appropriateness Criteria® Radiologic Management of Uterine Leiomyomas topic was finalized. Using the search strategies described above, an additional 1,073 articles were found. Seventeen articles were added to the bibliography. The remaining articles were not used due to either poor study design, the articles were not relevant or generalizable to the topic, the results were unclear, misinterpreted, or biased, or the articles were already cited in the original bibliography.

The author added 8 citations from bibliographies, websites, or books that were not found in the new literature searches, including 8 articles outside of the search date ranges.

One citation is a supporting document that was added by staff.
