Literature Search Summary

Of the 130 citations in the original bibliography, 117 were retained in the final document.

A literature search was conducted in April 2015 and March 2017 to identify additional evidence published since the *ACR Appropriateness Criteria® Cranial Neuropathy* topic was finalized. Using the search strategies described above, 559 articles were found. Thirteen articles were added to the bibliography. The remaining articles were not used due to either poor study design, the articles were not relevant or generalizable to the topic, or the results were unclear or biased.

The author added 2 citations from bibliographies, websites, or books that were not found in the literature searches that were found outside of the search date ranges.

Four citations are supporting documents that were added by staff.
