Literature Search Summary

Of the 70 citations in the original bibliography, 60 were retained in the final document. A literature search was conducted in April 2015 and updated on August 2017 to identify additional evidence published since the ACR Appropriateness Criteria® Abdominal Aortic Aneurysm-Interventional Planning and Follow-up topic was finalized. Using the search strategy described above, 889 articles were found. 34 articles were added to the bibliography. One hundred and thirty-three articles were not used as they were duplicates already cited in the original bibliography or captured in more than one literature search. The remaining articles were not used due to either poor study design, the articles were not relevant or generalizable to the topic, or the results were unclear or biased.

The author added 3 citations from bibliographies, websites, or books that were not found in the literature searches. Three citations are supporting documents that were added by staff.
