Literature Search Summary

Of the 32 citations in the original bibliography, 18 were retained in the final document.

A new literature search was conducted in May 2016 and updated in September 2017 to identify additional evidence published since the *ACR Appropriateness Criteria® Imaging of Mesenteric Ischemia* topic was finalized. Using the search strategies described above, 406 unique articles were found. Twenty-seven articles were added to the bibliography. The remaining articles were not used due to either poor study design, the articles were not relevant or generalizable to the topic, or the results were unclear or biased.

The author added 29 citations from bibliographies, websites, or books that were not found in the literature searches, including 26 articles outside of the search date ranges.

Two citations are supporting documents that were added by staff.
