Literature Search Summary

Of the 65 citations in the original bibliography, 14 were retained in the final document.

A new literature search was conducted in December 2015 and updated on March 2016 to identify additional evidence published since the ACR Appropriateness Criteria® Breast Cancer Screening topic was finalized. Using the search strategy described above, 379 articles were found. Twenty-four articles were added to the bibliography. The remaining articles were not used due to either poor study design, the articles were not relevant or generalizable to the topic, the results were unclear, misinterpreted, or biased, or the articles were already cited in the original bibliography.

The author added 27 citations from bibliographies, websites, or books that were not found in the new literature search.
