Appendix Key
A more complete discussion of the items presented below can be found by accessing the supporting documents at the designated hyperlinks.

### Appropriateness Category
The panel's recommendation for a procedure based on the assessment of the risks and benefits of performing the procedure for the specified clinical scenario.

### SOE: Strength of Evidence
The assessment of the amount and quality of evidence found in the peer reviewed medical literature for an appropriateness recommendation.

- **References**: The citation number and PMID for the reference(s) associated with the recommendation.
- **Study Quality**: The assessment of the quality of an individual reference based on the number of study quality elements described in the reference.

### RRL: Relative Radiation Level
A population based assessment of the amount of radiation a typical patient may be exposed to during the specified procedure.

### Rating
The final rating (1-9 scale) for the procedure as determined by the panel during rating rounds.

### Median
The median rating (1-9 scale) for the procedure as determined by the panel during rating rounds.

### Final tabulations
A histogram showing the number of panel members who rated the procedure as noted in the column heading (ie, 1, 2, 3, etc.).
